PROFESSIONAL SUMMARY

DevOps Engineer with hands-on experience designing, deploying, and maintaining cloud-native infrastructure and Kubernetes-based platforms across 30 microservices in production and development. Led a zero-downtime EKS upgrade across 3 clusters, cut deployment cycle time by 89% through Jenkins-based CI/CD automation, and reduced AWS compute costs by 15% via Karpenter optimization. Experienced with AWS, Azure, and Google Cloud Platform (GCP), Kubernetes ecosystem tools, and Infrastructure as Code frameworks for building scalable, resilient, and automated environments. Strong background in Linux system administration, production incident response, and GitOps-based deployment workflows, including a 24-hour manual disaster recovery across AWS regions. Proven ability to manage microservices platforms, optimize infrastructure utilization, and maintain reliable application delivery pipelines.

TECHNICAL SKILLS

Cloud Platforms	AWS,GCP,Azure (EC2, EKS, S3, IAM, VPC, Route 53, Auto Scaling, CloudWatch), Basic exposure to Microsoft Azure (Virtual Machines, Databases)
DevOps & CI/CD	Jenkins, ArgoCD, GitHub Actions, CI/CD Pipelines, GitOps Workflows
Containers & Orchestration	Docker, Kubernetes (Amazon EKS), Helm, Microservices Deployment
Infrastructure as Code	Terraform, AWS CloudFormation
Operating Systems	Linux (Ubuntu), Bash Scripting, Linux System Administration
Web & Infrastructure	Nginx, Apache HTTP Server, Reverse Proxy Configuration
Monitoring & Observability	Prometheus, Grafana, AWS CloudWatch, Metrics Monitoring, Alerting
Networking & Cloud Infra	VPC Networking, Route 53 DNS, Load Balancers, Security Groups, IAM Roles & Policies
Storage & Data Services	Amazon S3, AWS EFS, Kubernetes Persistent Volumes, S3 CSI Driver
Version Control	Git, GitHub (Branching, Merging, Pull Requests)

PROFESSIONAL EXPERIENCE

2Cloud — DevOps Engineer

Dec 2025 – Present

Working as a DevOps Engineer responsible for managing cloud infrastructure, Kubernetes clusters, and production application deployments across hybrid environments, with primary ownership of 30 microservices across production and development.

- Manage microservices-based applications deployed on Amazon EKS (30 services: 14 production, 16 development) with container orchestration and Karpenter-driven cluster resource management.
- Administer Kubernetes clusters including networking configuration, ingress management, autoscaling policies, and security controls; led a zero-downtime upgrade of 3 EKS clusters from Kubernetes 1.32 to 1.34 (~30 minutes per cluster, zero pod disruption)..
- Deploying a Flutter-based application on Kubernetes with production-grade ingress routing and automated scaling.
- Designed and maintained CI/CD pipelines using Jenkins, ArgoCD, and Playwright/Allure-based test automation, cutting deployment cycle time by 89% (3 hours manual to 20 minutes automated) and improving release reliability.
- Implementing GitOps-based workflows to maintain version-controlled infrastructure and application configuration.

- Troubleshooting production incidents and performing root cause analysis, including a manual 28-hour cross-region recovery of a full cluster and 15 microservices after a regional AWS outage, to improve system stability and reduce downtime.
- Managing on-premise servers and virtualized infrastructure as part of hybrid deployment environments.

Bridge Skill — DevOps Engineer Intern

May 2025 – Nov 2025

Completed a DevOps internship focused on developing foundational cloud and automation skills through hands-on labs and real-world DevOps workflows.

- AWS cloud infrastructure provisioning and management (EC2, S3, IAM, VPC)
- Containerization and image management using Docker
- Infrastructure as Code using Terraform
- Linux system administration, server configuration, and troubleshooting
- CI/CD pipeline fundamentals and automation workflows
- Monitoring and logging using AWS CloudWatch
- DNS configuration and domain management using Route 53

KEY PROJECTS

AWS EKS Platform Setup, Scaling & Cost Optimization

Built scalable Amazon EKS infrastructure for development and production environments (30 microservices total), supporting reliable Kubernetes container orchestration and optimized compute resource utilization. Analysed CPU and memory usage patterns per pod to implement Karpenter-based infrastructure rightsizing, cutting AWS compute costs by 15% and standardizing cluster provisioning across environments.

Microservices CI/CD & Infrastructure Operations (30 Services)

Managed operational lifecycle activities for 30 microservices deployed in a containerized Kubernetes environment, including deployment updates, environment rollouts, and troubleshooting service-level issues. Designed and maintained CI/CD pipelines using Jenkins integrated with Playwright and Allure-based testing, cutting deployment cycle time by 89% (3 hours to 20 minutes). Implemented GitOps-based delivery patterns to manage infrastructure and application configuration through version-controlled repositories.

Flutter Application Deployment on Kubernetes with End-to-End CI/CD

Managed operational lifecycle activities for more than twenty microservices deployed in a containerized Kubernetes environment. Responsibilities included deployment updates, pipeline modifications, environment rollouts, and troubleshooting service-level issues. Designed and maintained CI/CD pipelines using Jenkins integrated with Git-based workflows to automate build, test, and deployment processes.

EKS Observability & Alerting (Prometheus + Grafana)

Implemented an observability solution for Amazon EKS Kubernetes clusters using Prometheus for metrics collection and Grafana for visualization, including custom dashboards to monitor cluster infrastructure, pod performance, and application-level metrics. Improved operational visibility and enabled faster incident diagnosis and troubleshooting through centralized monitoring. Integrated Slack-based alerting for real-time notifications on resource failures, pod crashes, and abnormal system behaviour, improving cluster health monitoring and incident response efficiency.

EDUCATION

Bachelor of Computer Applications (BCA)

2022 – 2025

Jamia Hamdard collage ,kannur | Deemed to be University
